Azinhack 2025

Elysian 2025 | 24-hour hackathon

Date: 16-17 October 2025

Event report

Azinhack, organised as part of Elysian 2025, was one of IoSC EDC's flagship initiatives and a major highlight of the academic year. Conducted as a 24-hour hackathon, the event provided a platform for students to collaborate, innovate, and develop technology-driven solutions to real-world challenges.

The hackathon recorded over 6,000 registrations from across India, with more than 1,500 team entries. It brought together developers, designers, and aspiring innovators in a competitive environment that encouraged creativity, problem-solving, and rapid development.

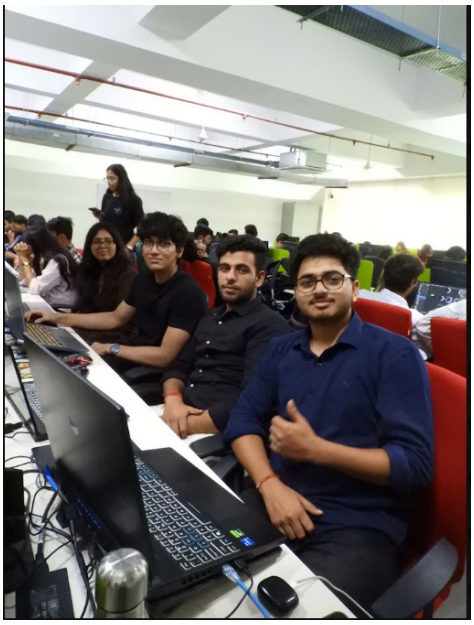

Participants progressed from ideation to implementation through intensive development sessions. Expert mentorship, hands-on workshops, and guidance from industry professionals supported teams as they refined their ideas and worked towards functional solutions.

Azinhack demonstrated the club's capacity to coordinate large-scale technical events while creating meaningful opportunities for learning and collaboration. The event also encouraged participants to strengthen their teamwork, technical skills, and ability to execute ideas under time constraints.
