IoSC Mentorship Program

Structured technical learning and project experience

Duration: September 2025 - October 2026

Event report

The IoSC Mentorship Program was designed to provide selected students with structured technical learning and practical project experience under expert guidance. The programme received more than 150 applications, from which approximately 40 students were selected for focused mentorship.

Participants worked within the club's specialised teams: Web Development, Internet of Things, Game Development, and Artificial Intelligence and Machine Learning. Through hands-on projects, students gained experience applying technical concepts to practical problems while developing their problem-solving and collaborative skills.

The programme emphasised guided learning, teamwork, and leadership development. Its selective structure enabled participants to engage more deeply with their chosen domains and build the foundations required for more advanced technical work.

The mentorship initiative represented the club's ongoing commitment to nurturing technical talent and helping students progress from foundational knowledge to practical expertise.
