VESHack

24-hour hackathon

Date: October 2024
Venue: USAR

Event report

VESHack was organised as a 24-hour hackathon aimed at encouraging innovation, technical proficiency, and collaborative problem-solving among students. The event provided participants with a platform to transform their ideas into practical solutions by working on real-world problems within a time-constrained environment.

Participants worked in teams to brainstorm ideas, develop prototypes, and present their solutions to the judging panel. The hackathon encouraged creativity, teamwork, and the application of technical knowledge beyond the classroom. It also offered students an opportunity to interact with fellow innovators, exchange ideas, and gain valuable experience in developing technology-driven solutions.

The event successfully promoted a culture of innovation and hands-on learning, motivating students to explore new technologies and strengthen their problem-solving abilities.
